

What is the Water Cycle?

The Water Planet

Water Cycle

Evaporation and Condensation

## What is the Water Cycle?

1. About how much of the Earth is water?

-

2. About how much of the Earth is fresh water?

-

1. What is meant by the term water cycle?

-The \_\_\_\_\_ process by which Earth's water moves from the \_\_\_\_\_ to the \_\_\_\_\_ and back to the surface again.

2. If most rainwater comes from the oceans, why isn't it salty?

-When ocean water turns into \_\_\_\_\_, all of the salts \_\_\_\_\_ in the water stay in the ocean.

1. What is evaporation?

-The process by which a liquid changes into a \_\_\_\_\_. Water evaporates because \_\_\_\_\_ causes it to change into water \_\_\_\_\_.

2. What is condensation?

-The process by which a gas changes into a \_\_\_\_\_. When water vapor \_\_\_\_\_ it condenses on \_\_\_\_\_ particles forming \_\_\_\_\_.

3. What do we call clouds that form near the ground?

-
